

CASE STUDY & INSIGHTS FROM OUR WORK

Unified Systems & Processes in 3rd party Steel Tube manufacturing

Progility played a pivotal role in assisting one of India's largest steel tube manufacturers in optimizing their third-party manufacturing network. The Project successfully facilitated the establishment of a unified system across six manufacturing sites, enhancing operational efficiency and cohesion within the organization.

Key Challenges Identified

Lack of Unified Systems & Process across sites leading to inconsistent reporting and supply risks

No formal processes at 3rd party to manage critical process of Safety & Quality, Production reporting, Scrap declaration etc

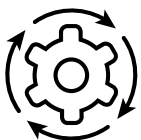

Weak supply chain interface & lack of processes leading to losses

How we helped

Digital platform to connect all 3rd parties on same platform for key systems of Safety, Quality, Mill Utilization, Machine Breakdown history, Rejection Monitoring

Manufacturing Systems & Productivity improvement projects on all operational parameters for roll change, downtimes, speed losses to reduce supply risk

Streamlining of Planning processes and alignment with RM planning and despatched to ensure smooth inventory flow in the plants

Standardised Contracts across all sites along with streamlining of cost structures and introduction of Site Coordinators to establish effective governance

Our Impact

15-20%

Mill utilization improvement

10-15%

Contracting Cost Reduction

40-50%

Improvement in Safety Audit Scores

20-25%

Reduction in Quality Non Conformances
